SITUATION SUMMARY

Labor Day Weekend BART Transbay Tube Closure

BART has shut down train service between Oakland and San Francisco over the Labor Day weekend, September 5-7, so workers can rebuild a section of track near the Transbay Tube. Train service stopped at the end of service Friday, September 4, and will remain closed until the start of service on Tuesday morning. BART also wants to remind people since Monday is a holiday, BART will operate on a Sunday schedule that day.

- Nearly 100 buses will continuously shuttle passengers between 19th Street BART Station in Oakland and San Francisco's Temporary Transbay Terminal.
- The West Oakland BART Station will be closed during the shutdown. If West Oakland is your home station, there will be a shuttle available to take you to 19th Street/Oakland station.
- Additional information regarding the modified BART schedule can be accessed here:

WEATHER

WEATHER SYNOPSIS BY REGION:

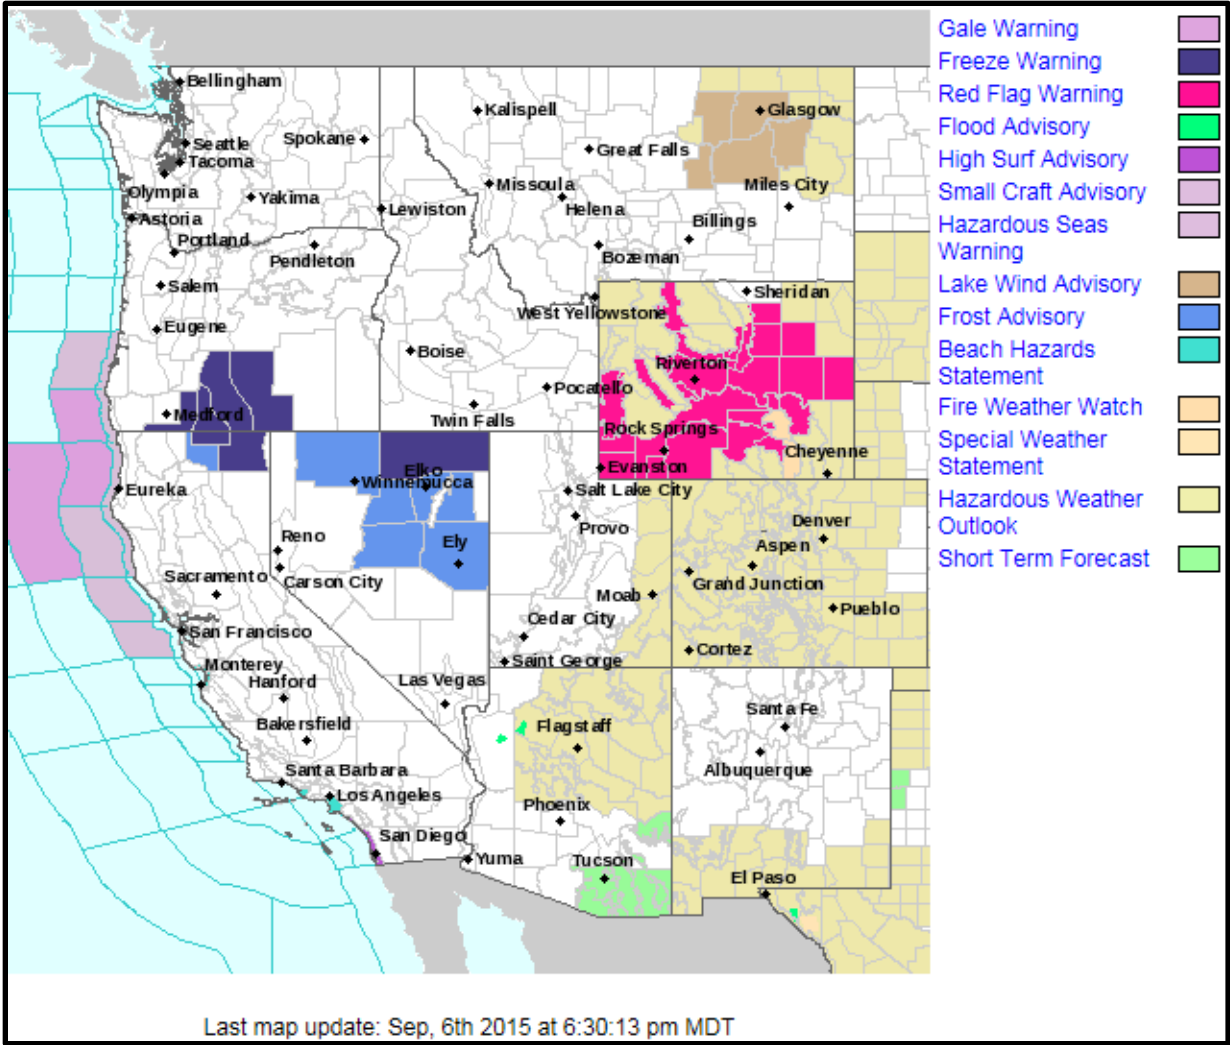

NORTHERN CALIFORNIA

The low pressure trough to our north and northeast will send one last disturbance south through Oregon to near the northern California border late today. It will put just patchy clouds across that area, and no North Operations precipitation is expected. Otherwise high pressure aloft slowly strengthens over northern California for the first half of this week, before becoming strong in the latter half of the week. The air mass will continue to dry, with areas of single-digit minimum humidity increasing, and a larger share of the Geographic area having poor to just mediocre overnight relative humidity recovery. Upper level winds will be decreasing day-to-day, but at the lower levels night and morning breezes will flow from the surface ridges in Oregon and Nevada into the thermal trough near the California coast. For the Sacramento Valley and foothills southwestward, this is a light foehn event, and stronger a.m. gusts will be mainly in an 18-25 mph range. Look for maximum temperatures to climb back to triple digits in the warmest low valleys by Tuesday, and climb further to a 102-108 range in the second half of the week. Some thermal belt areas may not see any relative humidity recovery to above 35-45% for five days plus. It presently appears that there is some possibility for a band of subtropical moisture to reach the area about a week from today, but confidence is still low at this time.

SOUTHERN CALIFORNIA

High pressure currently over Mexico will move northward into California and strengthen as the week progresses bringing a significant warming trend to the region. Widespread triple digit heat will affect most valley and foothill locations Tuesday through Saturday. Minimum humidity will be mainly in the single digits and teens across Central California away from the coast through the end of this week. Minimum humidity across Southern California will be mainly between 15% and 30% this week as it will be closer to some deep tropical moisture just to the south over Baja. Any thunderstorm activity is expected to remain just south and east of the region. No low clouds and fog are expected this week as the marine layer will be very shallow or non-existent. Winds will be light through the end of this week.

CAL OES MISSIONS

New Cal OES Missions

- **2015-LAW-15756, 09/05/15, 2058 hours:** International Emergency Response Coordination Center (IERCC) reported a SPOT device activation in Kings Canyon National Park, S/E of Darwin Canyon, coordinates: 37 11.13N, 118 41.53W. LDO contacted Kings Canyon Park Rangers who had also received the distress alert. However, due to the smoke from the Rough Fire and darkness, Rangers advised they would be hiking in at first light this morning. **Mission Ongoing**

Mission:

We protect lives and property, build capabilities, and support our communities for a resilient California.

We achieve our mission by serving the public through effective collaboration in preparing for, protecting against, responding to, recovering from, and mitigating the impacts of all hazards and threats.
